

The way in which we use energy, water and materials has a direct impact on the competitiveness and future viability of our business.

By signing up to the pledge, we agree to:

- Commit to embedding resource efficiency in our own business operations;
- Show leadership in driving sustainable growth through our supply chain; and
- Actively contribute to achieving a low carbon economy for Scotland.

During the next twelve months, we will achieve this with the following actions:

1. Assign senior manager responsibility
2. Achieve environmental accreditation
3. Staff induction programme
4. Implement an asset register
5. Promote the use of public transport
